

Summary of projects from shortlisted EuroTeQ Collider teams at TalTech participating at the EuroTeQathon.

Challenge - On a mission to prevent maternal mortality!

Team name - UTER

Summary of the project

The UTER project addresses postpartum hemorrhage (PPH), a leading cause of maternal mortality, with a massage belt equipped with sensors for automatic fundal massages. This device reduces the need for manual intervention by nurses, minimizes discomfort for new mothers, and alerts medical personnel in case of uterine abnormalities. It aligns with SDGs for Good Health and Well-being, Gender Equality, and Partnerships for the Goals by enhancing maternal care and safety.
